

East Africa Migration Calendar

September-

The migration moves into Kenya's Maasai Mara in search of water and fresh grazing.

August - Most of the migration is concentrated in the Ikorongo area where the Mara is crossed to get into the sweet grasses of the Maasai Mara.

July-The migration moves north east through the Grumeti towards the Ikorongo Controlled Area. Some migratory animals move towards the Lobo area.

June-The rains are ending and the dry season is approaching as the migration crosses the Grumeti River - the Grumeti crocodiles enjoy their annual feast.

May – The migration follows the Mbalageti river towards the Grumeti Controlled Area where the long grass plains and woodlands provide food.

April-The migration starts moving slowly through woodlands towards the western corridor as the long or heavy rains set in. The wild flowers come out in full bloom.

December The migration started leaving Kenya's Maasai Mara in November. It moves quickly south down the Loliondo boundary. The rains have started and fresh grass covers the Serengeti Plains.

January – The migration is settled in the short grass lands on the southern plains. Game moves into the Ngorongoro Crater. Zebra are foaling.

February – Over 2 million wildebeest, zebra, gazelles, eland and predators are in the Serengeti plains. Wildebeest are dropping foals.

March – The heavy rains are approaching and the short grass plains are starting to take strain.
